

FieldConx[™] Fiber Optic Field-Installable Connectors and Tools

Operation Instructions

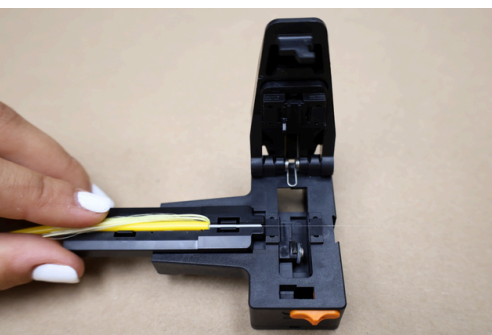

Fiber Cleaver

Step 1: Push the lock to the right side to release lid.

Step 2: Push the blade shelf down to the cutting position.

Step 3: Place fiber and cutting jig into holder until cleaver stopper.

Step 4: Press down the lid and release when you hear a click sound.

Step 5: The lid will open automatically after releasing it. Discard the cut fiber and remove the cable from the holder. Cleave is complete.

Cleaning & Maintenance

Fiber Cleaver

Fiber end face cutting failure can be caused by dust and other debris, so maintaining the cleanliness of the blade and clamp pads is imperative.

To properly clean the blade and clamp pads, wipe each gently with a cotton swab. If using a cleaning solution, we recommend only using ethyl alcohol.
